

## Environment

We are a mechanical and electrical design consultancy and installation contractor working together with many manufactures and contractors to deliver the most efficient solution for the environment focusing on minimal waste possible.

Each project shall be assessed and adhered to the company's environmental policy. To fulfil the policy, staff at all levels are involved in taking responsibilities in compiling as a minimum an 'Environmental Risk Assessment' for all projects. The company managing director has responsibility for Environmental Policy and is in charge of implementing the policy.

We are committed to leading the industry in minimising the impact of its activities on the environment.

The key points of its strategy to achieve this are:

- Minimise waste by evaluating operations and ensuring they are as efficient as possible
- Minimise toxic emissions through the selection and use of its fleet and the source of its power requirement
- Actively promote recycling both internally and amongst its customers and suppliers
- Source and promote a product range to minimise the environmental impact of both production and distribution
- Monitor and review our environmental procedures and auditing compliance to ensure standards are being maintained whilst identifying potential areas for improvement
- Reduce the environmental impact of our sites and offices and their effects on local communities by adopting reasonable controls for preventing air and noise pollution
- Make use of opportunities to minimise waste and to reuse or recycle materials wherever practicable
- Train employees and promote environmental awareness throughout the Company

We aim to continually review our approach to environmental issues by monitoring the best practice offered by the UK's Environmental Agency.
